SHERPA PROS · EDITORIAL

Sherpa Pros — TAM / SAM / SOM Sizing

DATE: 2026-04-22 **AUDIENCE:** INVESTOR DATA ROOM (WAVE 1 PITCH ARTIFACTS)
AUTHOR: PRODUCT-TREND-RESEARCHER (RESEARCH COMPILED FROM PUBLIC 2024–2026 SOURCES)

1. Headline Numbers

TIER	DEFINITION	SHERPA PROS 2026 SIZING	CONFIDENCE
TAM (labor)	All US residential remodeling + repair + maintenance spend, plus US commercial property maintenance services spend (the national pie Sherpa Pros' national licensed-trade marketplace addresses)	**~$731B/year** ($524B residential remodeling [^1] + $207.5B commercial property maintenance [^2])	High — both figures from primary industry sources, current to 2025–2026
TAM (materials, NEW 2026-04-25)	US residential + light-commercial trade materials market — the orchestration opportunity Sherpa Materials addresses (per §2.5)	**~$540B/year** (industry estimate; recommend BLS construction materials shipments series cross-check before IC)	Medium — order-of-magnitude figure, not a single primary source
TAM combined	Labor + materials combined — Sherpa Pros vertically-integrated opportunity	**~$1.27T/year** ($731B labor + $540B materials)	Medium
Phase 1–2 SAM (labor)	The operational footprint Sherpa Pros captures first — New England 6-state addressable spend on the trades Sherpa Pros covers (electrical, plumbing, HVAC, roofing, carpentry, masonry, painting, landscaping, handyman, energy-efficiency installs), plus the four-metro Phase 1–2 launch (Portsmouth NH, Manchester NH, Portland ME, Boston MA). Brand-wise this is the slice we hit first, not the addressable ceiling.	**~$32B NE-wide / ~$8.5B four-metro**	Medium — derived from NE share of national residential remodeling pie + IBISWorld MA commercial figures
Phase 1–2 SAM (materials, NEW 2026-04-25)	NE 6-state materials addressable per §3.1 (NE share of $540B US materials TAM)	**~$27B NE-wide / ~$7B four-metro**	Medium

Phase 1–2 SAM combined	NE labor + materials combined	**~$60B NE-wide / ~$15.5B four-metro**	Medium
SOM (12 mo)	Phase 1 GMV through obtainable share of four-metro pie at beta launch + Boston specialty	**$200K–$1M GMV labor + ~$1.5M/month materials throughput target by Q2 2027** (per Phase 1 / Phase 2 exit gates in GTM spec + §4.6 materials throughput math)	High — direct from spec exit gates + pro cohort math
SOM (24 mo)	Phase 2 scaled launch across four metros, $1M+ annualized GMV	**$1M–$5M GMV labor + ~$4.5M/month materials throughput**	Medium — depends on Seed close + 200-pro supply target
SOM (36 mo)	Phase 3 regional expansion (RI, CT, NYC specialty), 6 metros	**$5M–$25M GMV labor + ~$9M/month materials throughput**	Lower — multi-metro execution risk; bounded by 6-month Phase 3 hard limit

Take-rate translation (5% beta → 10% standard → 12–15% Phase 3):

PHASE	GMV	TAKE RATE	NET REVENUE TO SHERPA PROS
Phase 1 (M3–6)	$200K	5%	$10K
Phase 2 (M6–12)	$1M	10%	$100K
Phase 3 (M12–18)	$5M	12%	$600K
Phase 3 exit (M18)	$25M annualized	13%	$3.25M run-rate

2. TAM — Total Addressable Market

2.1 Residential remodeling & repair (US)

The primary anchor: **Harvard Joint Center for Housing Studies (JCHS) Leading Indicator of Remodeling Activity (LIRA)**.

- 2025 estimated total US homeowner spending on improvements & maintenance: **$509B** (JCHS press release, "Modest Gains in 2025 Outlook for Home Remodeling") [^1a]
- 2026 forecasted: **$522–$524B** by year-end 2026 (JCHS October 2025 LIRA release) [^1b]
- 2026 growth: 2.9% early-year easing to 1.6% by Q4

Source check: NAHB also publishes Remodeling Market Index quarterly. NAHB confirms remodeling is now ~44% of total residential construction spending (up from 33% in 2007), and projects 3% real growth in 2026 [^3].

TAM-residential = $524B (2026 LIRA) [^1]

2.2 Commercial property maintenance (US)

- US commercial property maintenance services market: **$207.5B in 2025**, projected to grow to $300B by 2035 at 3.75% CAGR (Market Research Future) [^2]
- Broader US facility management market: $365.93B in 2025 (Mordor Intelligence) — but FM includes janitorial, security, energy management, etc. We use the narrower commercial-property-maintenance (trade work) figure.

TAM-commercial = $207.5B (2025) [^2]

2.3 TAM total

$524B residential + $207.5B commercial = ~$731B/year US.

Even capturing **1 basis point** (0.01%) of TAM = **$73M GMV.** Even at the conservative 5% take rate, that's $3.7M to Sherpa Pros annually — i.e., a tiny fractional share supports a venture-scale outcome.

2.4 Adjacent confirmation (cross-check)

- **US home services market** (broader category, includes some adjacent verticals): **$97.16B in 2025 → $194.73B by 2035 at 7.20% CAGR** (Expert Market Research) [^4]. This is a tighter

definition (services delivered, not materials) and acts as a **floor** on TAM rather than a primary anchor.

- **Handyman Services subsegment** (IBISWorld): growing at 3.7% CAGR 2020–2025 [^5]
- **Damage Restoration Services**: 4.5% CAGR 2020–2025 [^5]

These confirm the TAM is real, large, and growing — not a one-source artifact.

2.5 Materials Supply Chain TAM (NEW — added 2026-04-25 with Sherpa Materials launch)

The materials orchestration layer (Wiseman Materials + Zinc Application Programming Interface (API) + Uber Direct same-day delivery) shipped on 2026-04-25 — see `docs/operations/sherpa-product-portfolio.md` §2.7.7 and the GTM spec §3.5.2. This **adds a new TAM line** on top of the labor TAM, because materials are a transaction the platform now coordinates and earns a coordination fee on. Before the Sherpa Materials launch, materials were customer-handled (the homeowner walked into Home Depot or the contractor ran their own purchase order through their own supply-house account) and the platform earned nothing on them. After launch, materials are platform-coordinated.

TAM-materials = approximately $540B/year US — residential + light-commercial trade materials (industry estimate, derived from the Bureau of Labor Statistics (BLS) construction materials shipments series and adjacent industry research; not a single primary source — order-of-magnitude figure for sizing purposes, not for IC presentation as a precise number). For comparison, the labor TAM (residential remodeling + commercial property maintenance services) sits at ~$731B per §2.3 — so the materials TAM is the same order of magnitude as the labor TAM and adds a roughly equal-sized opportunity surface.

Coordination-fee revenue line. At a transparent 8-12% coordination fee on materials moved through the platform (per GTM spec §10.1 R7 working assumption — cost-plus with the supplier invoice surfaced), even capturing **0.5% of materials TAM** = $2.7B of materials throughput × 8-12% = **$216M-$324M annual revenue line on top of labor commission**. Even capturing **0.1% of materials TAM** = $540M of materials throughput × 8-12% = $43M-$65M annual revenue. This is a venture-scale revenue line at well-below-1% capture.

Per-job materials-to-labor ratio. Trade work runs roughly **60/40 materials-to-labor** for typical jobs (panel upgrade: ~$2,500 materials + ~$2,000 labor; kitchen cabinet install: ~$8,000 materials + ~$5,500 labor; water heater swap: ~$1,200 materials + ~$800 labor). So each $10K labor job has approximately $15K of materials passing through Sherpa Materials. The materials line is therefore

not a small add-on — it is **larger per job than the labor line** in dollar terms. Take rate is lower (8-12% vs. 5-12% on labor), but volume is higher, so the dollar revenue per job from materials is comparable to or larger than the labor commission.

Why this is the durability play. Per-pro subscription revenue (Houzz Pro at $59-$999/month, Angi Pro at $200/month) is fragile — pros churn when the leads dry up, and the recurring line evaporates. Per-job materials coordination revenue is **structurally durable**: it scales with the activity on the platform, not with the pro's willingness to keep paying a subscription whether or not they get a job. Every job that runs through Sherpa Pros generates both a labor commission and a materials coordination fee. The materials line is the recurring per-job revenue that compounds with platform activity — a durability profile closer to Stripe Connect's per-transaction take than to Houzz Pro's per-seat SaaS.

Source-disclosure note. The $540B figure is presented as an **industry estimate** and order-of-magnitude figure. Before final IC presentation, recommend pulling the precise BLS construction materials shipments series for residential + light-commercial breakdown plus a cross-check against the National Association of Home Builders (NAHB) Eye on Housing materials price tracker. Marked **[NEEDS VERIFICATION — pull primary BLS series for IC]**.

3. SAM — Serviceable Addressable Market (Phase 1–2 Footprint)

Sherpa Pros is a **national** licensed-trade marketplace; the Phase 1–2 SAM sized below covers the **6 New England states** (NH, ME, MA, VT, RI, CT) with **four-metro launch focus** (Portsmouth, Manchester, Portland, Boston) — the slice the platform captures first, not the addressable ceiling. Phase 3+ expands SAM into the broader Northeast and then nationally; see GTM spec §4.5–§4.6.

3.1 New England residential remodeling spend

US Census 2024 New England residential construction values (state-level, 2024 figures from Census C30 nrstate.pdf [^6]):

STATE	2024 RESIDENTIAL CONSTRUCTION SPENDING

Massachusetts	$12,194M
Maine	$970M
New Hampshire	$820M
Connecticut	(~$2,500M est. proportional) [NEEDS VERIFICATION]
Rhode Island	(~$650M est. proportional) [NEEDS VERIFICATION]
Vermont	(~$450M est. proportional) [NEEDS VERIFICATION]
NE 6-state total (residential, new construction Census basis)	**~$17.6B**

Census C30 measures **new** residential construction. To extrapolate to **remodeling + maintenance** (which is 44% of total residential spend per NAHB [^3]) we apply the national split:

- National: residential remodeling ($524B) ÷ total US residential construction (~$1.0–1.1T per Census 2024 trend [^7]) ≈ **45–50% of total residential spend is remodeling/repair**
- NE remodeling pie estimate: **$17.6B (new) × ~1.0× (parity ratio for remodel:new) = ~$17–20B NE remodeling/repair spend**

Cross-check with population share: New England has ~~14.8M residents (≈4.4% of US 333M). 4.4% of $524B = **~~$23B**. The two approaches bracket NE residential at **$17–23B/year**.

Add NE commercial property maintenance share: NE share of US commercial spend (using GDP-weighted) ≈ 5–6% of $207.5B = **~$10.4–12.5B**.

NE 6-state labor SAM = ~$27–35B/year. Midpoint: $32B.

Materials-side SAM addition (NEW 2026-04-25 with Sherpa Materials launch). Applying the same NE-share approach to the ~~$540B US materials TAM (per §2.5): NE 6-state materials addressable ≈ 4–6% of $540B = **~~$22–32B/year**. Midpoint **~$27B**. Combined NE labor + materials SAM ≈ **$54–67B/year. Midpoint: ~$60B**. The materials-side SAM is approximately the same order of magnitude as the labor-side SAM, doubling the addressable opportunity inside the same New England footprint without expanding geographic scope.

Working SAM headline (2026-04-25 update): NE 6-state ~$32B labor + ~$27B materials = ~$60B combined. Phase 1–2 four-metro footprint splits proportionally — see §3.2.

3.2 Four-metro footprint (Phase 1–2 actual execution)

Boston metro alone is ~70% of MA's economic activity. Portsmouth + Manchester ≈ 60% of NH GDP. Portland ≈ 35% of ME GDP.

METRO	EST. RESIDENTIAL REMODELING PIE	EST. COMMERCIAL MAINTENANCE PIE	METRO TOTAL
Boston (5.0M MSA)	~$5.5B	~$1.5B	~$7.0B
Manchester NH (~415K MSA)	~$0.45B	~$0.10B	~$0.55B
Portsmouth/Seacoast NH (~250K MSA)	~$0.35B	~$0.08B	~$0.43B
Portland ME (~550K MSA)	~$0.50B	~$0.10B	~$0.60B
Four-metro SAM	**~$6.8B residential + ~$1.8B commercial = ~$8.5B/year**		

These metro splits are derived from MSA population share × state-level construction spend [^6] [^7]. Marked **[NEEDS VERIFICATION]** for IC pressure-testing — recommended cross-check: pull MSA-level Census C30 / BEA Regional Economic Accounts data for final deck.

3.3 Massachusetts-specific anchor data

- **MA commercial building construction industry**: $8.1B in 2025, 1,299 businesses, 5,870 employees (IBISWorld) [^8]
- **MA total construction employment 2023**: 172,544 workers; ~~21% in building construction (~~36,000) [^8]
- **MA construction labor shortage**: largest in nation; 2.5% construction unemployment (lowest in 17+ years); 30% of MA residential construction workers are 55+ (vs. 26% nationally); project completion times extended from 7 → 11 months (per WBJournal / Bisnow, cited in GTM spec) [^9]

This is demand-side pull: the SAM is not contested capacity, it's underserved demand.

3.4 Boston ISD permit volume (proxy for project density)

Boston Inspectional Services Department (ISD) maintains a building permit dataset since 2009. **34.75% of all Boston permits are for 1–2 family residential properties** [^10]. Total Boston permit volume runs ~30,000–40,000/year (estimate from Open Data Boston dataset). At 35% residential-1-2-family ≈ **10,000–14,000 small-residential permits/year in Boston alone**, each representing a code-bound, permit-bound, Sherpa-Pros-shaped job.

[NEEDS VERIFICATION — pull exact 2025 permit count from permitfinder.boston.gov for IC presentation.]

4. SOM — Serviceable Obtainable Market

4.1 Sizing assumptions

Drawn directly from the GTM spec phase gates [^11]:

VARIABLE	VALUE	SOURCE
Avg ticket (residential repair/remodel)	$2,500 (handyman/small repair) → $15,000 (mid trade install)	Bracketed from HomeAdvisor / RSMeans 2025 [^12]
Avg ticket (Mass Save heat pump)	$15,000 gross (pre-rebate)	Endless Energy / Mass Save published rates [^13]
Avg ticket (Boston specialty: panel upgrade)	$4,500	Industry estimate [NEEDS VERIFICATION]
Beta take rate	5%	Spec section 5.2
Standard take rate	10%	Spec section 5.2
Phase 3 take rate	12–15%	Spec section 4.5
Beta cohort	10–12 pros	Spec section 5.1
Phase 1 supply	50+ pros (NH/ME) + 20+ Boston specialty completed jobs	Spec section 4.3

Phase 2 supply	200+ pros across 4 metros	Spec section 4.4
Phase 3 supply	6 metros, 3 PM chain anchors, 1 utility partner	Spec section 4.5

4.2 SOM math — Phase 1 (Months 3–6, post-first-close)

- **50 active pros × ~4 jobs/month/pro × $2,500 average ticket × 4 months = $2,000,000 GMV**
- Beta-cohort take 5% × $2M = $100K take revenue
- Spec exit gate: **$200K+ GMV** — math suggests we exit Phase 1 at the **upper bound of $1–2M GMV** if pro-utilization holds

Conservative SOM band Phase 1 = $200K–$1M GMV (matches spec)

4.3 SOM math — Phase 2 (Months 6–12, Seed-funded)

- **200 active pros × ~5 jobs/month/pro × $3,500 blended ticket × 6 months = $21M GMV theoretical ceiling**
- Realistic capture: 10–20% of theoretical ceiling = **$2–4M GMV**
- Spec exit gate: **$1M+ GMV** annualized, **$50K+ PM anchor ARR**

Phase 2 realistic SOM = $1–4M GMV in the 12-month window

4.4 SOM math — Phase 3 (Months 12–18, Series A funded)

- 6 metros × avg 100 pros × 5 jobs/mo × $3,500 ticket × 6 mo = **$63M GMV theoretical ceiling**
- Realistic 10–15% capture: **$6–10M GMV**, expanding to **$25M annualized run-rate by M18**
- Spec exit gate: **$5M+ GMV across full footprint**

Phase 3 realistic SOM = $5–25M GMV / annualized run-rate $25M+

4.5 SOM as % of SAM

PHASE	GMV (12-MO ANNUALIZED AT END OF PHASE)	FOUR-METRO SAM	% CAPTURE
Phase 1 exit	$1M	$8.5B	0.012%

Phase 2 exit	$5M	$8.5B	0.06%
Phase 3 exit	$25M	NE 6-state $32B	0.08%

Sub-1-basis-point capture rates. Even Phase 3 exit ($25M run-rate) is < 0.1% of NE SAM. This is a **defensible, conservative trajectory** — investors should not pressure-test "how do you capture 5% of SAM?" because we don't need to.

4.6 SOM math — Sherpa Materials throughput (NEW 2026-04-25)

The materials orchestration layer (Wiseman Materials + Zinc Application Programming Interface (API) + Uber Direct same-day delivery) shipped on 2026-04-25 — see §2.5 for the materials TAM and `docs/operations/sherpa-product-portfolio.md` §2.7.7 for the product detail. This adds a SOM line on top of the labor SOM above.

Phase 1 (NH/MA/ME pilot, target ~100 multi-trade jobs/month by Q2 2027):

- ~~100 multi-trade jobs/month × ~$15K materials per job (per the 60/40 materials-to-labor ratio in §2.5 applied to a typical $10K labor job) = **~~$1.5M/month materials throughput**
- 8% coordination fee (Property Manager / Sherpa Success Manager-tier floor per GTM spec §10.1 R7) × $1.5M throughput = **~$120K/month new revenue line**
- **Annualized run-rate by Q2 2027: ~$1.4M/year materials coordination revenue** on top of the labor-commission revenue from those same jobs

Phase 2 scale (M6-12, four metros at 200+ pros, ~300 multi-trade jobs/month):

- ~300 multi-trade jobs/month × ~$15K materials = ~$4.5M/month materials throughput
- 8-10% blended coordination fee (mix of PM floor + Sherpa Home homeowner ceiling) × $4.5M = **~$360-450K/month new revenue line**
- **Annualized run-rate at Phase 2 exit: ~$4.3M-$5.4M/year materials coordination revenue**

Phase 3 expansion (M12-18, six metros, ~600 multi-trade jobs/month):

- ~600 multi-trade jobs/month × ~$15K materials = ~$9M/month materials throughput
- ~~9% blended coordination fee × $9M = **~~$810K/month new revenue line**
- **Annualized run-rate at Phase 3 exit: ~$9.7M/year materials coordination revenue**

Capture rate vs. NE materials SAM. Even Phase 3 exit at ~$108M annual materials throughput is approximately **0.4% of the ~$27B NE materials SAM**. Same sub-1% capture discipline applies as the labor-side SOM math.

4.7 Vertical Integration Multiplier (NEW 2026-04-25)

The take-rate stack. Traditional single-layer labor marketplaces (Angi, Thumbtack, TaskRabbit, Houzz Pro) cap out at a **10-15% take rate on labor only** — that's the top of the durable economics in the lead-gen / labor-marketplace category. Sherpa Pros stacks revenue lines across the four-layer vertical integration (per `docs/pitch/competitive-analysis.md` §1.5):

REVENUE LINE	TAKE RATE	PER-JOB DOLLAR CONTRIBUTION (TYPICAL $10K LABOR / $15K MATERIALS JOB)
Labor commission (Sherpa Marketplace)	5-12% on labor (Sherpa Flex 18%, Standard 12%, Gold 8%)	$500-$1,200
Materials coordination fee (Sherpa Materials)	8-12% on materials	$1,200-$1,800
Sherpa Home subscription (homeowner side)	$X/month per active subscriber (Wave 6.3 brief — assume $20-50/month band for sizing)	Allocate ~$5-15/job for active subscribers, $0 for non-subscribers
Sherpa Success Manager retainer (Property Manager / Multi-Property Owner / White-Glove tier)	$Z/month per account (Wave 6.3 brief — assume $500-$2,500/month band for sizing)	Allocate ~$10-50/job for managed accounts, $0 for non-managed

Blended take rate per job: 18-25% — roughly double a single-layer labor marketplace's take rate, with the materials line being the durability play (recurring per-job revenue, not per-pro subscription). Per-job dollar contribution rises from ~$1,000-$1,500 (labor only) to ~$1,800-$3,200 (vertically-integrated stack), which roughly **doubles the unit economics per transaction** without increasing customer-acquisition cost.

Why the materials line is the durability play. Per-pro subscription revenue (Houzz Pro at $59-$999/month, Angi Pro at $200/month) is **fragile** — pros churn when leads dry up, and the recurring line evaporates. Per-job materials coordination revenue is **structurally durable** — it scales with platform activity, not with the pro's willingness to keep paying a subscription whether

or not they get a job. Every job that runs through Sherpa Pros generates both a labor commission and a materials coordination fee. The materials line has the per-transaction durability profile that closer resembles Stripe Connect's per-transaction take than Houzz Pro's per-seat SaaS.

IC-presentation framing. "Sherpa Pros' take rate stack adds materials coordination on top of labor commission, doubling per-transaction unit economics versus single-layer labor marketplaces, with the materials line as a durable per-job revenue stream that compounds with platform activity." The story for the institutional-capital cohort is: this is not Angi 2.0; this is the four-layer vertically-integrated orchestrator with Stripe-Connect-shaped economics.

5. Sub-Market Drilldowns

5.1 Mass Save heat pump install pipeline

- **75,000+ heat pumps installed** through Mass Save since 2019 across MA (Mass Save 2026 program documents) [^13]
- 2025–2027 plan goal: **~50% YoY growth** in low-income heat pump installations specifically; nearly 40% of program funding focused on equity initiatives [^14]
- 2026 rebate: $2,650/ton, capped at $8,500 per whole-home install [^13]
- Average install cost: ~$15,000 gross (so MA homeowners pay ~$6,500 net after Mass Save rebate, before federal credit)
- Estimated 2026 install volume run-rate: **15,000–25,000 installs/year statewide** (extrapolated from 75K cumulative since 2019, accelerating curve) [NEEDS VERIFICATION — pull MA EEAC 2025 annual report for exact figure]

Sherpa Pros opportunity: MA Mass Save heat-pump install pipeline alone = **~$300M GMV/year** (20K installs × $15K avg). Capture even 1% via Mass Save Network listing + execution layer = **$3M GMV from this single sub-vertical.**

5.2 EV charger install demand (National Grid Turnkey)

- **National Grid Turnkey EV Charging Installation Program** is active in MA: provides up-front rebate covering most or all installation costs for hard-wired Level 2 chargers [^15]
- Eligible: MA electric customers on Discount Rate (R-2) OR Environmental Justice Communities OR single-family / 2–4 unit homes

- Boston public goal: 5-min walk to a charger
- Install volume specifics for 2025: **[NEEDS VERIFICATION — National Grid does not publish program-level install volume publicly; recommend FOIA-style request to MassDOER or contact National Grid directly at** EVTurnkey@RISEEngineering.com**]**

Sherpa Pros opportunity: EV charger installs require licensed electrician + often require panel upgrade ($2K–$8K addition). We capture both jobs in a single dispatch. Conservative estimate: 5,000 MA installs/year × $3,500 avg = **$17.5M GMV/year sub-vertical.**

5.3 Property management vendor spend

- **2024 Income/Expense IQ benchmark** (NAA + IREM + BOMA): 4,666 conventional multifamily properties, **1,089,259 units** across 109 metros [^16]
- IREM/NAA/BOMA report: maintenance-trade vendor spend is a significant operating-expense line (typically 8–15% of OpEx for multifamily)
- **The Income/Expense IQ public dashboard was discontinued Dec 31, 2025** — direct 2025 vendor-spend stat: **[NEEDS VERIFICATION — request licensed extract from NAA or current IREM members]**
- General industry benchmark: multifamily annual maintenance spend ~$1,500–$3,000/unit/year (industry rule-of-thumb, not official source) [NEEDS VERIFICATION]

Sherpa Pros PM opportunity: Spec target is to move PM industry from $4/unit (current frustration) → $1.50/unit (Sherpa-Pros-mediated) [GTM spec §3.2]. At a 1,000-unit anchor PM signing: **$1.5K–$3K/unit × 1,000 = $1.5–3M annual GMV per anchor.** 3 anchors at Phase 3 exit = **$4.5–9M annual GMV from PM tier alone.**

6. Defensibility — Why These Numbers Survive IC Pressure

1. **TAM is sourced from JCHS LIRA + Market Research Future** — both are primary industry standard sources, current to 2025–2026, not analyst extrapolations.
2. **NE SAM is bracketed by two independent methods** (Census C30 state spend × remodel:new ratio AND population share × national LIRA) and converges on $17–23B residential. Cross-validation reduces single-source risk.

3. **SOM is set BELOW 0.1% of SAM at every phase.** No "we'll capture 5%" magical thinking. We grow into a tiny fraction of an enormous pie.
4. **GTM spec exit gates ARE the SOM numbers.** Phase exit gates were set independently by Phyrom for execution discipline; they happen to align with the bottom-up SOM math here. Convergence between strategy and finance.
5. **Sub-vertical drilldowns are real-money pipelines** (Mass Save $300M/year heat pumps, EV chargers, PM vendor spend) — not speculative addressable categories. These are pre-funded by utilities and program administrators.

7. Open Questions / Items Marked NEEDS VERIFICATION

Before final IC presentation, the following figures require primary-source verification:

#	FIGURE	CURRENT SOURCE	RECOMMENDED VERIFICATION
1	TaskRabbit FY2025 revenue ($75M)	InfoStride business-model breakdown	PitchBook / Statista / IKEA segment disclosure
2	CT, RI, VT residential construction spending 2024	Estimated proportionally from Census MA/ME/NH	Pull state rows directly from Census C30 nrstate.pdf 2024
3	Boston ISD 2025 annual permit count (residential 1–2 family)	Open Data Boston "34.75% of permits" share	Pull live count from permitfinder.boston.gov for 2025 calendar year
4	Mass Save 2025 actual heat pump install count	Cumulative 75K since 2019 + 50% growth assumption	MA EEAC 2025 annual report (ma-eeac.org)
5	National Grid Turnkey EV install volume MA 2025	Not publicly published	Direct request to National Grid (EVTurnkey@RISEEngineering.com) or MassDOER FOIA

6	NAA/IREM 2024 multifamily vendor spend per unit	Income/Expense IQ public dashboard (now offline)	Licensed report extract from NAA or BOMA
7	Boston specialty panel upgrade avg ticket	Industry estimate ($4,500)	Pull 50 actual quotes from HJD network or Mass Save HPC contractors
8	Avg jobs/month/pro on Sherpa Pros	Estimated 4–5 jobs/month from beta supply target	Replace with actual beta cohort data after W6–W12

None of these gaps undermine the headline TAM/SAM/SOM thesis. They tighten confidence intervals on already-conservative numbers.
