SHERPA PROS · EDITORIAL

Stop juggling 40 vendors in spreadsheets.

SHERPA PROS IS THE WORK-ORDER PLATFORM BUILT BY A WORKING CONTRACTOR — FOR PROPERTY MANAGERS RUNNING 100 TO 5,000 UNITS.

Licensed Verified Code-aware Local

Phyrom · Founder · Sherpa Pros · NH General Contractor

SHERPA PROS · EDITORIAL

I am Phyrom. I have lived both sides of this problem.

Who is talking to you

I run **HJD Builders LLC**, a licensed general contractor in New Hampshire. Twelve years in the trades.

For ten of those years I have been on the **sell side** of property manager work orders — the contractor your team calls at 2 a.m. when a heat pump dies. I know what makes a vendor reliable, what makes a property manager easy to work with, and where the dollars leak in between.

I have also been on the **buy side** — managing 30 plus subcontractors across active job sites, with the same spreadsheet-and-group-text mess your maintenance director wrestles with every Monday.

I built Sherpa Pros because the platforms my crew gets pitched every week — Angi, Thumbtack, TaskRabbit, Handy — solve the wrong problem. They sell leads to contractors. They do not run a property manager's vendor stack.

So I built the one I wished existed. **Built by a contractor. For the people who hire contractors.**

SHERPA PROS · EDITORIAL

Four pain points your team feels every single week.

The property manager vendor problem

- **Vendor sourcing is chaos.** When a heating call comes in at 2 a.m., who gets it? Honest answer in most shops: a spreadsheet, a group text, and whoever picks up first. That is not a process. That is a coin flip.
- **Quality is inconsistent and invisible.** You have 40 vendors in rotation. Three of them are great. Five of them are slow. Some you suspect are overcharging. Nobody on your team can prove which is which because **nobody has the data in one place.**
- **Compliance is a January fire drill.** License, insurance, **W-9 (taxpayer ID form)**, **Certificate of Insurance (COI)** — chased by email every renewal. A lapsed COI on a vendor who damages a unit is a liability event waiting to happen.
- **Unit-level finance is invisible.** You know what you spent at the property level. You do not know what you spent **per unit**, what was **Operating Expense versus Capital Expenditure**, or what each work order did to **Net Operating Income (NOI)**. The data exists. It just lives in 40 different places.

SHERPA PROS · EDITORIAL

This is what your stack looks like today.

Today's property manager vendor workflow

TOOL	WHAT IT DOES	WHAT IT COSTS YOU
Spreadsheet of 40 vendors	Phone numbers, sometimes a note	Out of date the day after you build it
Group text / phone tree	Dispatch	No record of who declined, no audit trail
Paper or PDF invoices	Vendor billing	Site manager retypes into accounting
Manual 1099-NEC tracking	Year-end tax form (Nonemployee Compensation)	Bookkeeper spends 2 weeks every January
Annual COI chase	Insurance compliance	One email at a time, often misses renewals
Property-level GL only	Finance reporting	No unit-level NOI, no CapEx vs OpEx

The hidden cost: a typical site manager spends **6 to 10 hours per week** just coordinating work orders, chasing vendors, and reconciling invoices. At a fully loaded $35 an hour that is **$10,000 to $18,000 per site per year** in pure coordination overhead — before you fix a single toilet.

SHERPA PROS · EDITORIAL

One platform. The whole vendor stack.

What Sherpa Pros replaces

TODAY (40 VENDORS IN SPREADSHEETS)	WITH SHERPA PROS
Spreadsheet of vendors	**One inbox** for every work order across the portfolio
Group text dispatch	**Match-and-go dispatch** — closest qualified pro confirmed in < 30 minutes
No quality data	**Vendor scorecard** — response time, days to close, first-time-fix rate, cost variance, tenant rating
Paper invoices	Stripe-direct payment, automatic reconciliation
January 1099-NEC scramble	**Automatic 1099-NEC reporting** at year-end
Annual COI chase	**License + insurance + W-9 + COI** auto-tracked, auto-renewed
Property-level GL only	**Unit-level finance** — every job tagged to property + unit
Manual CapEx vs OpEx tagging	**Sherpa Smart Scan auto-tags every work order to CapEx or OpEx — your bookkeeper stops hand-coding.** Receipt scanner reads vendor invoices in the field, attaches them to the work order, and classifies every line automatically.

One login. One source of truth. Built by a contractor, not a software company.

SHERPA PROS · EDITORIAL

Same-day Quick Job dispatch.

A PRE-PRICED MENU. A LICENSED PRO. **CONFIRMED IN UNDER 30 MINUTES. ON SITE WITHIN 24 HOURS.**

This is what your maintenance director will use ten times a week.

SHERPA PROS · EDITORIAL

Same-day dispatch from a pre-priced menu.

How Quick Job lane works

The menu (Sherpa Pros sets the price band per metro):

TASK	NH / ME	MA
Toilet install (customer-supplied)	$250 – $350	$325 – $450
Faucet replacement	$150 – $250	$200 – $325
Smoke / CO detector swap	$75 – $125 per unit	$100 – $150 per unit
Single accent wall paint touch-up	$200 – $275	$275 – $350
Ceiling fan install (existing wiring)	$200 – $300	$275 – $400
GFCI outlet replacement (licensed electrician)	$125 – $175	$175 – $225
Leaky valve / shutoff replacement	$200 – $325	$275 – $425

The lifecycle (target end-to-end: under 90 seconds to confirm a pro):

`Tenant text → PM dispatches in 2 taps → Pro confirms in <30 min → On site within 24-48 hr → Pro marks done in app → Auto-posts to that property + unit P&L → Stripe releases pro in 24 hr`

No bidding war. No phone tag. No spreadsheet update. The job is on a licensed pro's calendar before your maintenance director finishes their coffee.

Sherpa Threads — work-order-attached chat with a text-message bridge. Every conversation between the tenant, the site manager, and the pro is attached to the work order. The tenant texts from their normal phone (no app to install); replies land in-app for your team and for the pro. Read receipts, file attachments, full audit trail when a dispute happens. The "they said in a text" leak that wrecks vendor accountability — fixed.

SHERPA PROS · EDITORIAL

Project mode for the bigger work.

When the job is more than a $250 toilet swap

Quick Job covers the everyday. **Project mode** covers the work that drives your capital plan:

- **Heat pump installations** (Mass Save certified pros, $10K+ per home in rebates surfaced automatically)
- **EV charger installations** (licensed electrician + panel upgrade)
- **Electrical panel upgrades**
- **Full unit repaints, full kitchen and bath renovations**
- **Old-house specialty work** — plaster and lath, slate roofs, brownstone repointing
- **Triple-decker exterior and porch work** (Boston-specific code, ISD permits)

How Project mode works:

- **Pre-bid with 3 vetted licensed pros.** No pay-to-bid. No lead-share noise.

- **Code-aware quote validation.** Every quote is checked against National Electrical Code (NEC), International Residential Code (IRC), and state code before you see it. Catches missing line items, wrong materials, code violations.
- **Permit handling included.** The platform knows which jobs need a permit and walks the pro through pulling it.
- **Rebate-aware.** Mass Save, National Grid, EV-charger rebates surfaced at quote time.

SHERPA PROS · EDITORIAL

Compliance, done for you.

You stop chasing paperwork

Every vendor on Sherpa Pros has, on file, current and verified:

- **License** (state license check, re-verified at renewal)
- **General liability insurance** (with the policy number and the carrier)
- **W-9** (taxpayer ID form for 1099 reporting)
- **Certificate of Insurance (COI)** with your property entity named where required

What changes for your team:

TASK	TODAY	WITH SHERPA PROS
New-vendor onboarding paperwork	2–4 hours per vendor	**Zero — done at vendor signup**
Annual COI renewal chase	January fire drill, often misses lapses	**Auto-tracked, auto-renewed**

1099-NEC year-end reporting	2 weeks of bookkeeper time	**Automatic at year-end**
Lapsed-insurance liability exposure	Constant, hard to monitor	**System blocks dispatch if insurance lapses**

You stop chasing paperwork. The platform does it.

SHERPA PROS · EDITORIAL

Unit-level finance, automatically.

You stop reconciling spreadsheets

Every work order auto-posts to the property **and the unit**. Every line is tagged automatically as:

- **Operating Expense (OpEx)** — repairs, maintenance, turnover, day-to-day
- **Capital Expenditure (CapEx)** — heat pumps, panel upgrades, kitchen rebuilds, anything with a depreciation schedule

What your finance team gets:

- **Net Operating Income (NOI) impact** visible in the dashboard at the property level and the portfolio level
- **Schedule E ready** for the accountant — every line categorized, vendor 1099-NEC ready
- **Vendor scorecard** sortable by cost variance — instantly shows which vendor is overpriced for which work type

- **Property-level vs portfolio-level views** — your asset manager sees that Property A has a vendor problem while Property B is humming

> *Most portfolios are paying their worst vendor the most. Not because anyone wants that — because nobody has the data to see it. Once the data is in front of you, the next vendor renegotiation is a different conversation.*

SHERPA PROS · EDITORIAL

Pricing that pays for itself in the first month.

$4 per unit per month at entry. $1.50 per unit at scale.

PORTFOLIO SIZE	PER UNIT / MONTH	MONTHLY COST	ANNUAL COST
100 units	$4.00	$400	$4,800
200 units	$4.00	**$800**	$9,600
500 units	$3.00	$1,500	$18,000
1,000 units	$2.50	$2,500	$30,000
5,000+ units	$1.50	**$7,500**	$90,000

Compare against the cost of one staff hour per week chasing vendors:

- 1 hour / week × $150 fully loaded rate = **$7,800 per year** in pure coordination overhead per site manager
- Most sites lose **6 to 10 hours per week** to vendor coordination today
- A 200-unit portfolio with one site manager loses **$46,800 to $78,000 per year** in coordination overhead

Sherpa Pros at 200 units costs $9,600 per year. Saves more than its fee in the first month.

SHERPA PROS · EDITORIAL

Optional: Portfolio Protection.

Replace the per-vendor COI hassle with one policy

Sherpa Pros Portfolio Protection — $24 per unit per year, on top of the platform tier.

What it covers:

- All Sherpa Pros work performed at your units in that year
- **$50,000 to $250,000 per claim** caps (commercial-grade, B2B contract)
- Materials defects, structural defects, consequential damage, vendor failure
- Optional **Commercial General Liability rider for the property manager** — replaces your per-vendor COI tracking entirely

The math on a 1,000-unit portfolio:

- $24 × 1,000 units = **$24,000 per year**
- One mid-size water-damage claim from a vendor mistake: **$15,000 to $40,000**

— One missed COI on a vendor who damages a unit and disappears: **uncapped exposure**

Backed by a real specialty commercial insurance carrier (white-label MGA backend). A.M. Best A-rated. Not a promise from a software company.

SHERPA PROS · EDITORIAL

What changes Day 1.

A 30-day pilot at one property. Then roll out when you are convinced.

STEP	WHAT WE DO	WHAT YOU DO
Week 1	We migrate your existing vendor spreadsheet into the platform — license, insurance, W-9, contact, rate history	Hand us the spreadsheet
Week 1	We onboard each vendor (2 minutes each, we make the calls)	Approve the preferred-vendor list
Week 2	Maintenance director gets a 30-minute training. Tenants get a text-in number.	Pick the pilot property
Week 2 – 30	Live work orders flow. Same-day Quick Job dispatch. Vendor scorecard fills in.	Use it. Tell us what is wrong.
Day 30	We send you a one-page report — jobs run, response times, cost variance, hours saved	Decide: roll out to portfolio, or walk away

Beta-pilot pricing: $0 platform fee for the 30-day pilot. You pay only the 5 percent take rate on completed jobs.

If you are not convinced at Day 30, you walk away owing nothing on the platform fee.

SHERPA PROS · EDITORIAL

Sherpa Guard — your auditor will thank you.

Role-Based Access Control + audit logs, baked in

Every action a person takes in Sherpa Pros — every work order assigned, every payment released, every vendor approved, every COI uploaded — is recorded with **who did it, what they did, on which target, and when.** Every record. Every time. Sortable, filterable, exportable.

Five role tiers, permission-scoped:

ROLE	SEES	CAN DO
Owner	Full portfolio, all properties, all units, all financials	Everything
Admin	Full portfolio (configurable property scope)	Approve vendors, release escrow, configure tiers
Project Manager	Assigned properties + units	Dispatch work orders, approve invoices
Pro	Own assigned work orders only	Bid, message, mark complete, upload receipts

Client / Tenant	Own jobs and own units only	Post work orders, message, rate

Sample audit-log row (the format your auditor will ask for):

ACTION	USER	ROLE	TARGET	TIMESTAMP
Work order #4017 dispatched	jdoe@portfolio.com	PM	Building 12 / Unit 4B	2026-04-25 09:14:22 ET
Vendor approved	mgray@portfolio.com	Admin	ABC Plumbing LLC	2026-04-25 09:18:47 ET
Escrow released $475.00	mgray@portfolio.com	Admin	Work order #4017	2026-04-25 11:32:09 ET
Insurance lapsed — auto-blocked	system	RBAC engine	XYZ Electric LLC	2026-04-25 12:00:00 ET

Why this matters at audit time: when your accountant asks who approved the $12,000 capital expenditure on Property C in Q2, the answer is one filtered audit-log query — not a week of email archaeology. When a regulator asks how you ensure every vendor on a unit had current insurance, the answer is "RBAC blocks dispatch the moment a Certificate of Insurance lapses." When your insurance carrier asks for a chain of custody on a vendor incident, the answer is the audit log, exported to comma-separated values (CSV).

Sherpa Guard is the SOC 2-readiness signal. SOC 2 is the security certification institutional partners (large lenders, large property-management chains, large insurance carriers) ask to see before signing. Most platforms in this category cannot produce this. Sherpa Guard ships it on Day 1.

SHERPA PROS · EDITORIAL

Make-ready in one job, not four.

Multi-trade unit turnover, sequenced on one timeline

A typical apartment turnover involves **four separate trades** showing up on four separate days, often in the wrong order, often with idle days in between:

1. **Cleaning** — appliances out, deep clean
2. **Paint** — touch-up or full repaint
3. **Carpet** — replacement or steam clean
4. **Appliance** — refrigerator, dishwasher, range hood swap

Today: 4 separate vendors, 4 separate phone calls, 8–12 days of unit downtime, $300–$600 in lost rent.

With Sherpa Dispatch — multi-trade timeline orchestration: all four trades sequenced on one timeline, handoffs owned by the platform, blockers surfaced before they become slips. **Same turnover finishes in 4 days.**

STEP	TODAY (4 VENDORS, 4 PHONE CALLS)	WITH SHERPA DISPATCH
Schedule	Site manager calls 4 vendors over 3 days	One Dispatch request, all 4 trades sequenced
Day 1	Cleaning (or whoever picks up the phone first)	Cleaning
Day 2	Idle (waiting for paint vendor)	Paint (handoff owned by platform)

Day 3	Paint	Carpet (handoff owned by platform)
Day 4	Idle	Appliance — unit ready by end of day
Day 5–8	Carpet, then appliance, then re-walk	(already turned)
Total downtime	**8–12 days**	**4 days**
Lost rent	$300–$600 per turnover	$100–$200 per turnover

On a 1,000-unit portfolio with ~25% annual turnover, that is 250 turnovers per year. Compressing each by 5 days at $40 per day in lost rent = $50,000 per year recovered, before any vendor cost savings. The Dispatch upgrade pays for the platform fee on a 1,000-unit portfolio in 7 months on its own.

SHERPA PROS · EDITORIAL

The numbers, by portfolio size.

Net annual savings — conservative case

PORTFOLIO	PLATFORM FEE	SITE-MANAGER HOURS SAVED	VENDOR COST VARIANCE SAVED (6–11%)	NET ANNUAL SAVINGS

100 units	$4,800	1 site mgr × 6 hr/wk × $35 × 50 wk = $10,500	~$8,000	**+$13,700**
500 units	$18,000	2 site mgrs × 8 hr/wk × $35 × 50 wk = $28,000	~$36,000	**+$46,000**
1,000 units	$30,000	3 site mgrs × 8 hr/wk × $35 × 50 wk = $42,000	~$72,000	**+$84,000**
5,000 units	$90,000	8 site mgrs × 8 hr/wk × $35 × 50 wk = $112,000	~$360,000	**+$382,000**

The savings the table does not yet count:

- **Faster repair times reduce tenant churn.** A tenant who waits 8 days for a leaky valve is a tenant looking at apartments.com. One avoided turnover at $2,500 covers a 200-unit portfolio for 3 months.
- **Compliance fines avoided.** One lapsed COI plus a vendor incident is uncapped exposure.
- **Auditor time saved.** Every controller we have shown unit-level CapEx vs OpEx tagging to has called it the most valuable feature.

Net effect on a typical 1,000-unit portfolio: $6,500 to $14,000 in monthly NOI improvement. We charge $2,500.

SHERPA PROS · EDITORIAL

Want to pilot at one property?

30-DAY PILOT. ONE PROPERTY. WE MIGRATE YOUR VENDOR LIST. YOU PAY THE TAKE RATE ONLY — NO PLATFORM FEE FOR 30 DAYS.

If you are not convinced at Day 30, you walk away. No platform-fee invoice.

If you are, we roll out to the rest of the portfolio at your pace.

The differentiator vs. the spreadsheet-and-group-text status quo: Sherpa Guard (Role-Based Access Control plus audit logs) gives your auditor and your insurance carrier the chain of custody they have been asking your team for since 2022. **Sherpa Dispatch** (multi-trade timeline orchestration) compresses unit-turnover downtime from 8–12 days to 4 days by sequencing cleaning, paint, carpet, and appliance handoffs on one timeline. Together they replace what your team is doing today in 40 vendor spreadsheets, an annual COI fire drill, and a group text — with one platform that documents every handoff and shortens every turnover.
